Summary

AI engineer and full-stack software developer. I build AI agents and automation, React front-ends and cloud services on Azure and Google Cloud, backed by strong low-level and performance engineering from a games background (custom C++/OpenGL engines, Unity Netcode multiplayer).

Experience

NTT DATA – AI Engineer | Fullstack and Automation Jul 2026 – Present

- Reduced the running cost of an internal automation by roughly $30\times$ ($\approx 3000\%$) through optimization.
- Design and ship AI agents that automate internal workflows for banking-sector clients.
- Develop React front-ends and Azure/Google Cloud services, collaborating cross-functionally to deliver production-ready solutions.

GGTech Entertainment – Unity Developer | Netcode and Game Design Apr 2025 – Oct 2025

- Built multiplayer gameplay systems with Unity Netcode; designed gameplay mechanics, systems and levels.
- Contributed to a title shipped on Steam (*Crimanimals*); prototyping, technical docs and QA with TDD.

Coding Giants – Programming Instructor Jan 2025 – Mar 2025

- Taught programming and game development (Scratch, App Inventor, Minecraft Education, Unity, C#) to children and teens, fostering logic, creativity and problem-solving.

Icy Beak Studios – Graphic Software Engineer | Tech Art and Engine Oct 2024 – Jul 2025

- Built real-time VFX, GLSL shaders and custom C++/OpenGL rendering (PBR, particles, shadow mapping, post-processing).

Juanita.es – Web Developer 2023

- Built responsive, accessible e-commerce interfaces (PrestaShop) with the backend team.

Education

University of Alicante – B.Eng. in Multimedia Engineering Sept 2021 – 2026

- Thesis (9.5/10): a 3D graphics engine built from scratch, featuring interactive design and advanced shading techniques.

Selected Projects

- Cool Party Games** – realtime multiplayer web (React, TypeScript, Cloudflare Durable Objects).
- Cinema Listings** – serverless JavaScript app with GSAP and TMDB ratings.
- Crimanimals (Steam)** – Unity multiplayer roguelike; commercial release.
- Bubble Buddies** – 1st Prize, Global Game Jam 2025 (Unity, C#).
- Donut Panic!** – C++/OpenGL run-and-gun with behavior-tree AI and ECS.
- Assembly Armada** – Game Boy shooter in assembly (GB Retro Dev Jam 2024).

Achievements

- $\sim 30\times$ ($\approx 3000\%$) cost reduction on an internal automation at NTT DATA.
- 1st Prize, Global Game Jam 2025 (with Icy Beak Studios); a commercial title shipped on Steam (*Crimanimals*).
- Unity certification (2021); GB Retro Dev Game Jam 2024 (Game Boy assembly).

Skills

Programming: JavaScript, TypeScript, C#, C++, HTML/CSS, Assembly

Frameworks and Engines: React, Angular, Node.js, Unity, Unreal, OpenGL

Cloud and Tools: Azure, Google Cloud, Cloudflare, Vercel, Git

Concepts: AI agents, automation (n8n, Power Automate), REST APIs, netcode, ECS, QA/TDD, UX/UI

Languages: Spanish (native), Catalan, English
